**Holiday Planning API**

Scope

- ➢ **What they say they need:**
    - ✓ A web page to search and plan a holiday destination
    - ✓ The option to search by city
    - ✓ Be able to see options for: Accommodation, Bars & Restaurants and Touristic attractions
    - ✓ Ease to use
- ➢ **What they really need:**
    - ✓ A webpage which enables them to search for cities
    - ✓ A webpage which enables them to see options for accommodation, bar/restaurants and tourist attractions, with general information about the place
    - ✓ A user-friendly webpage
- ➢ **What they don't know they need**
    - ✓ A map which they are able to see the specific locations of the searched items on the map

- ➢ **Functional Vc Content Requirements**

Scenario	Requirements
The user wants to search for the city they want to visit	The user needs a search field
The user wants to see accommodations for that city	The user needs to see a comprehensive list of different places to stay throughout the city
The user wants to see Bar and Restaurants where they can go to	The user needs to see a list of Bar and Restaurants options
The user wants to see Touristic Attraction	The user needs to see a list of all the main Touristic Attractions in that city
The user wants to see information about the place searched	The user needs click on the spot on the graphic

Skeleton

Strategy

- ✓ Creating one webpage which the user can search for their next holiday destination
- ✓ The webpage should be user-friendly and have a nice and straight forward layout
- ✓ Display a map which shows the location spots of the places of interest searched

**Why is this so special and why would users want this?**

- ✓ It is a very simple and useful webpage to planning the holidays. Everybody needs to plan their holidays and are interested in knowing about nice places to go to such as pubs, restaurants and touristic attractions, and of course where to stay. It gives the user a visual geographical layout of city and specifically their points of interest within the city. Simplifies planning and getting around the city once there.

What makes "XXXXX" a good experience?

- ✓ Find out more about the cities that you wish to visit.
- ✓ Check the accommodation options available, their location and contact information for bookings. The webpage displays a map which shows the respective locations spots, which is very helpful to evaluate their plan for best getting around the city to optimise their trip.

What does the user expect?
